

PULMONARY VEIN STENOSIS PROGRAM

Leading Experts,
Cutting-Edge Therapies,
Personalized Care

 Children's Hospital
of Philadelphia®
Cardiac Center

The Pulmonary Vein Stenosis Program at Children's Hospital of Philadelphia (CHOP) provides expert diagnosis, individualized therapies and ongoing care to children with suspected or confirmed pulmonary vein stenosis.

WHO WE ARE

One of few highly experienced centers in the country, the Pulmonary Vein Stenosis team are experts from across the Cardiac Center, including cardiologists, interventional cardiologists, pulmonary hypertension specialists and cardiothoracic surgeons. Our interventional cardiologists are leaders in the field, pioneering new techniques in cardiac catheterization. With a rich basic science program, our research team is committed to developing novel therapies to improve care.

WHAT WE OFFER

The Pulmonary Vein Stenosis Program offers a personalized approach to each patient's care, based on the underlying cause of a patient's stenosis and the severity of disease. From cutting-edge interventional techniques to the latest medical therapies, our multidisciplinary team takes a step-by-step approach to treatment, escalating care as needed to manage recurrences. Because coordinated care is critical to manage the complex health care needs associated with pulmonary vein stenosis, our team coordinates with multiple specialties across CHOP to improve health outcomes and ensure the best experience for our patients.
